BS in Computer Science Engineering (4 th year) In order to ensure that a process (or a product) has a certain degree of quality and to improve it, it is necessary to have and apply a set of quantitative and qualitative indicators. Software measurement allows us to control what happens in projects and predict their effort and duration; as well as improve the quality of software products. Measurement has a long tradition and constitutes a fundamental discipline in any engineering, and Software Engineering should not be an exception, although the peculiarities that differentiate software from other products must always be kept in mind. The importance of a quantitative approach in phase planning, organization, and testing will be addressed. Agile methodologies, which are increasingly widespread, also need specific productivity and project progress indicators and metrics that will be
