

1. INTRODUCTION	11
2. ACID MINE DRAINAGE	17
2.1 Sulfide oxidation	19
2.1.1. Abiotic oxidation of pyrite	20
2.1.2. Biotic oxidation of pyrite	21
2.1.3. Oxidation of other sulfides.....	22
2.2. ¿Natural processes or anthropic contamination?	22
2.3. Natural attenuation processes of pollution	24
2.3.1. Hydrolysis reactions of carbonates and silicates.....	24
2.3.2. Dilution and mixing processes.....	26
2.3.3. Secondary minerals precipitation	27
2.3.3.1. Oxides, hydroxides and hydroxysulfates.....	28
2.3.3.2. Evaporitic soluble salts.....	31
2.3.4. Coprecipitation and adsorption processes	33
2.3.5. Sulfate reductive processes	33
2.4. Persistence of acid mine drainage	34
2.5. Main conclusions.....	35
3. THE IBERIAN PYRITE BELT (IPB): MINING HISTORY AND POLLUTION	37
3.1. Geology	39
3.1.1. Ossa Morena zone.....	39
3.1.2. Surportuguese zone and Iberian Pyrite Belt	39
3.1.3. Guadalquivir Depression	41
3.2. Characteristics of the Tinto and Odiel rivers.....	41
3.2.1. Relief	41
3.2.2. Climate	43
3.2.3. Hidrology	44
3.3. Mining history and pollution in the IPB	46
3.3.1. Brief mining history in the IPB	46
3.3.2. Evolution of AMD pollution	52
3.4. Main conclusions.....	58
4. POLLUTION IN THE TINTO AND ODIEL RIVER CATCHMENTS	61
4.1. Spatial distribution of pollution.....	63
4.1.1. Tinto river catchment.....	63
4.1.1.1. Riotinto mining district.....	64
4.1.1.2. Downstream of mining areas	68
4.1.2. Odiel river catchment	70
4.1.2.1. Odiel sub-catchment	71
4.1.2.2. Oraque sub-catchment.....	80
4.1.2.3. Meca sub-catchment.....	83
4.1.3. Concentrations before the Ría de Huelva estuary	84
4.2. Temporal evolution	89
4.2.1. Seasonal variations.....	89
4.2.2. Long term evolution.....	93
4.2.3. Impact of La Zarza mining spill on the Odiel River (May 2017).....	98
4.3. Pollutant load.....	102
4.3.1. Estimation methodology	102
4.3.2. Pollutant load delivered to the Ria de Huelva estuary	103
4.4. Main conclusions.....	107

5. POLLUTION IN WATER RESERVOIRS AND MINING PIT LAKES	109
5.1. Acidification processes in reservoir waters of the IPB	111
5.1.1. Introduction.....	111
5.1.2. Reservoirs non-affected by AMD.....	114
5.1.3. Olivargas and Andévalo reservoirs.....	116
5.1.4. Sancho Reservoir.....	117
5.1.5. Alcolea Reservoir	120
5.2. Mining pit lakes.....	123
5.2.1. Introduction.....	123
5.2.2. Pit lakes in Tharsis	126
5.2.3. La Zarza pit lake.....	132
5.2.4. San Telmo pit lake	135
5.2.5. Pit lakes in Herrerías. The “killer” lake	137
5.2.6. Corta Atalaya pit lake	138
5.3. Main conclusions.....	140
6. POLLUTION IN LA RIA DE HUELVA ESTUARY	143
6.1. Introduction.....	145
6.2. Water pollution.....	146
6.3. Sediment pollution.....	151
6.4. Affection to living organisms.....	153
6.4.1. Affection to vegetation	154
6.4.2. Affection to macrobenthos and fishes	158
6.4.3. Affection to birds.....	159
6.5. Main conclusions.....	160
7. PREVENTION AND REMEDIATION MEASURES OF ACID MINE DRAINAGE	163
7.1. Introduction.....	165
7.2. Methods to prevent AMD generation.....	166
7.2.1. Diversion of surface waters	166
7.2.2. Sealing of mining galleries and shafts.....	167
7.2.3. Dry covers	170
7.2.4. Wet covers	170
7.2.5. Microencapsulation	171
7.2.6. Addition of alkaline materials.....	172
7.3. Treatment methods for acidic leachates.....	173
7.3.1. Active treatment.....	174
7.3.2. Passive treatment.....	176
7.3.2.1. Constructed wetlands.....	177
7.3.2.2. Anoxic limestone drains (ALD).....	178
7.3.2.3. Reducing and alkalinity producing systems (RAPS).....	180
7.3.2.4. Sulfate reducing bioreactors (SRB).....	180
7.3.2.5. Open limestone channels (OLC).....	181
7.3.2.6. Disperse alkaline substrate (DAS)	181
7.4. Main conclusions.....	192
8. BIBLIOGRAPHY	193
